The #1 New York Times bestseller from FOX News star of Tucker Carlson Tonight offers “ a targeted snipe at the Democrats and Republicans and their elite enablers ” (New York Journal of Books) in a funny political commentary on how America ’ s ruling class has failed everyday Americans. “ Informal and often humorous...an entertainingly told narrative of elite malfeasance ” (Publishers Weekly), Tucker Carlson ’ s Ship of Fools tells the truth about the new American elites, a group whose power and wealth has grown beyond imagination even as the rest of the country has withered. The people who run America now barely interact with it. They fly on their own planes, ski on their own mountains, watch sporting events far from the stands in sky boxes. They have total contempt for you. In Ship of Fools, Tucker Carlson offers a blistering critique of our new overlords and answers the all-important question: How do we put the country back on course? Traditional liberals are gone, he writes. The patchouli-

scented hand-wringers who worried about whales and defended free speech have been replaced by globalists who hide their hard-edged economic agenda behind the smokescreen of identity politics. They ' ll outsource your job while lecturing you about transgender bathrooms. Left and right, Carlson says, are no longer meaningful categories in America. " The rift is between those who benefit from the status quo, and those who don ' t. " Our leaders are fools, Carlson concludes, " unaware that they are captains of a sinking ship. " But in the signature and witty style that viewers of Tucker Carlson Tonight enjoy so much, Ship of Fools is " bulging with big and interesting ideas, presented succinctly with wit and precision, each chapter a potential book in itself " (The Washington Times).

Intelligent Design creationism faults evolutionary biology for being "naturalistic," but ID is in its own strange way just as naturalistic. Like the man who can't find his car-keys at night and looks for them under a street-light, though he last saw the keys someplace else, intelligent design creationism seeks acts of God within the gaps in our scientific knowledge. Creation takes the goodness of this world on faith, but Creationism works to get out of the challenge of the doctrine of creation, not to embrace it.

Naseeruddin Shah's sparkling memoir of his early years, 'from zero to thirty-two', spans his extraordinary journey from a feudal hamlet near Meerut, to Catholic schools in Nainital and Ajmer, and finally to stage and film stardom in Mumbai. Along the way, he recounts his passages through Aligarh University, the National School of Drama and the Film and Television Institute of India, where his luck finally began to change. And Then One Day tells a compelling tale, written with rare honesty and consummate elegance, leavened with tongue-in-cheek humour. There are moving portraits of family members, darkly funny accounts of his schooldays, and vivid cameos of directors and actors he has worked with, among them Ebrahim Alkazi, Shyam Benegal, Girish Karnad, Om Puri and Shabana Azmi. The accounts of his struggle to earn a living through acting, his experiments with the craft, his love affairs, his early marriage, his successes and failures are narrated with remarkable frankness and objective self-assessment. Brimming with delightful anecdotes as well as poignant, often painful revelations, this book is a tour de force.

are radiometric. Radiometric dating, in general, refers to the dating of material by using the known rate at which certain radioactive isotopes decay, or at what rate there are collective changes due to radioactivity. Even though isotopes of an element can be different when it comes to atomic mass, the atomic number of the isotope is always the same. Radioactive elements decay at unique rates, dependant on the isotope. This rate of decay is known as half-lives, it is the time necessary for 1 / 2 of the atoms to decay in a particular element. The decay follows a geometric scale, in that in the first half-life of an element, 1 / 2 of the atoms decay, yet in the second half-life, 1 / 2 of those remaining decay, meaning a 1 / 4 of the original atoms decay, and so forth. By measuring this decay, and knowing the half life of an element, scientists can date a sample.
