A Bridge of Ships Nov 11 2021 In A Bridge of Ships James Pritchard tells the story of the rapidly changing circumstances and forceful personalities that shaped government shipbuilding policy. He examines the ownership and expansion of the shipyards and the role of ship repairing, as well as recruitment and training of the labour force. He also tells the story of the struggle for steel and the expansion of ancillary industries. Pritchard provides a definitive picture of Canada's wartime ship production, assesses the cost (more than \$1.2 billion), and explains why such an enormous effort left such a short-lived legacy. The story of Canada's shipbuilding industry is as astonishing as that of the nation's wartime navy. The personnel of both expanded more than fifty times, yet the history of wartime shipbuilding remains virtually unknown. With the disappearance of the Canadian shipbuilding industry from both the land and memory, it is time to recall and assess its contribution to Allied victory.

Fundamentals of Tractor Design Aug 08 2021 This textbook offers a comprehensive review of tractor design fundamentals. Discussing more than hundred problems and including about six hundred international references, it offers a unique resource to advanced undergraduate and graduate students, researchers and also practical engineers, managers, test engineers, consultants and even old-timer fans. Tractors are the most important pieces of agricultural mechanization, hence a key factor of feeding the world. In order to address the educational needs of both less and more developed countries, the author included fundamentals of simple but proved designs for tractors with moderate technical levels, along with extensive information concerning modern, premium tractors. The broad technical content has been structured according to five technology levels, addressing all components. Relevant ISO standards are considered in all chapters. The book covers historical highlights, tractor project management (including cost management), traction mechanics, tires (including inflation control), belt ground drives, and ride dynamics. Further topics are: chassis design, diesel engines (with emission limits and installation instructions), all important types of transmissions, topics in machine element design, and human factors (health, safety, comfort). Moreover, the content covers tractor-implement management systems, in particular ISOBUS automation and hydraulic systems. Cumulative damage fundamentals and tractor load spectra are described and implemented for dimensioning and design verification. Fundamentals of energy efficiency are discussed for single tractor components and solutions to reduce the tractor CO2 footprint are suggested.

Unexpected Circumnavigation Jun 18 2022 No one expected these thirty-something professionals to give up their successful careers to pilot their own small boat around the world, especially because they started with almost no boating experience. Instead of the expected sailboat, they chose a 43 foot trawler powerboat, which many believed was incapable of crossing oceans. Most people expected them to fail. But they surprised the skeptics when they successfully circumnavigated the globe in two years, visiting 110 places along the way in thirty-four countries. Part 1 of "The Unexpected Circumnavigation" follows Christi and Eric daily as they travel to eighteen exotic South Pacific islands that few people ever see. You will experience the local food and cultures, participate in island tours and adventure activities (include going to the rim of an active volcano!), and feel what it is like to be on long sea passages. Learn about the challenges, rewards and the surprises that come with both traveling and boating.
