To achieve a more responsive and more readily deployable fleet of surface combatants, the Navy adopted the Fleet Response Plan (FRP) in 2003 to replace its traditional two-year ship maintenance cycle. The authors of this report look at the effects the FRP has had thus far and determine whether maintenance resources are meeting maintenance demands and whether related industry resources have been coordinated effectively. Chilton's original line of model-specific information covers older vehicles. Each manual offers repair and tune-up guidance designed for the weekend for the weekend mechanic, covering basic maintenance and troubleshooting. For the hobbyist or used car owner, this information is essential and unavailable elsewhere. This publication provides the United States Army and United States Marine Corps (USMC) commanders, artillerymen, and meteorology (MET) crew members with tactics, techniques, and procedures for the employment of MET sections. This publication describes the equipment and tasks required to develop MET data from the selection of the MET station location to the dissemination of the MET data. This manual describes current and emerging TA organizations. These organizations include target acquisition batteries and radar

platoons of active and reserve components, the corps target acquisition detachment (CTAD), radar platoons of the interim brigade combat team (IBCT) and interim division artillery (IDIVARTY), and the STRIKER platoon. Technical and tactical considerations for employing weapons locating radars are discussed in detail. This includes the AN/TPO-47 that is currently being developed. New information contained in this manual includes duties and responsibilities for key TA personnel, rehearsals, stability operations and support operations, rotary and fixed wing radar movement procedures, and automated target data processing. The methodology used by weapons locating radars to acquire, track and locate threat weapon systems is also discussed.
