This book is designed to not only expose beginning tax students to tax law, but to also teach the practical intricacies involved in the preparation of a tax return. To train tomorrow's tax preparers to handle the complex U.S. tax law, Fundamentals of Taxation's author team has devised four primary teaching advantages: The text is organized closely to follow the IRS tax forms. Actual tax forms are incorporated throughout the text, giving students the opportunity to understand the principles behind tax law while they learn how to work with clients to obtain the information they will need to complete tax forms. Proper reporting of tax issues are illustrated. The authors present a tax issue, discuss the legal requirements, illustrate the proper tax form placement, and show the completed form in the text, mixing practical and legal implications of tax preparation. Integration of an individual income tax software package (TaxACT). The authors supplement the text with citations of relevant tax authorities such as the Internal Revenue Code, Treasury Regulations, Revenue Rulings, Revenue Procedures, and court cases. This monograph investigates the intersectoral, international, and intertemporal allocation effects of alternative systems of capital income taxation characterized by different degrees of integration between corporate and personal taxation, depreciation rules, provisions for interest deductibility, and the like. The systems studied include those of the OECD countries as well as proposed systems advocated by various authors and tax committees. In contrast to the "Harberger literature", the book provides a microfoundation for the analysis of tax distortions. It is not assumed that the various components of capital income taxation can be lumped together as an "effective tax rate" that captures all the information relevant for assessing the distortions. Instead, the allocative roles of these components are explicitly derived from the households' and firms' optimization problems. Much emphasis is placed on the tax-induced interaction between the firms' real and financial decisions, and it is argued that this interaction fundamentally changes the nature of many of the tax distortions traditionally claimed for the real economy, sometimes even reversing their direction. All allocative results are derived from market equilibrium models. The distortion in the process of capital accumulation, for example, is studied in a perfect foresight intertemporal general equilibrium model with infinitely lived firms and households which is a decentralized version of the neoclassical model of optimal economic growth. Although basically theoretical, the book has a strong policy orientation and comments on a number of issues that are of current political

concern. Particular attention is paid to the 1981 and 1986 U.S. tax reforms. It is argued that the 1981 reform was a major cause of the disturbances in international capital markets which troubled the world economy at the beginning of the eighties and that the 1986 policy of 'tax cut cum base broadening' will stimulate economic growth, but induce capital flight from the United States into the rest of the world.
